

When you have a job that starts to heat up,

simply extrude it.

The Ecofan Airplus is a residential fan consisting of a two-piece extrusion that demonstrates the advantages of aluminum extrusion over other production processes. This AEC and ETF International Aluminum Extrusion Design Competition winner is a unique piece that is a highly effective and aesthetically pleasing product. When you have a hot new design, simply extrude it.

With aluminum extrusion from Magnode, complex parts can be produced quickly and inexpensively, while meeting extremely tight dimensional tolerances.

Magnode specializes in producing the components others consider too challenging. And our strict adherence to QS-9000 and ISO 9002 standards ensures the highest quality and consistency in parts that can range from under 1/2" to 17" in circle size.

Magnode's vertical integration offers complete in-house billet casting, extrusion, fabrication, finishing and assembly services.

So before you simply give up on a complex design, ask Magnode about simply extruding it.
